

The Knee Wall Brace was specially designed for 4' foundation or frost wall applications to align the wall quickly and accurately without having to use a full-size brace.

Utilize the accuracy and efficiency of a normal brace without having to shore up the wall with wood strongbacks and stakes. This rigid brace, designed in the same Plumwall style as the Original and Econo Brace systems, is comprised of a 4' upright and an adjustable strut.

The Knee Wall System uses the same adjuster wrench and block straps as the full-size Econo Systems currently available.
